

00 A TALK

Building fast is solved. Deciding well is not.

A talk on a career break, 2026.

Robert Blust · Software Engineer & Architect

RESTS ON `experience Building fast is solved. Deciding well is not.`

01 THE CLAIM —

The constraint moved.

Decide well over build fast: “AI moved the constraint from building quickly to deciding correctly; **the decision is the work.**”

A value in the model, quoted as it stands there.

RESTS ON `value Decide well over build fast`

One question, four months.

June to September 2026: what to do next, tested by building in the open.

It ended with a decision, not only an offer.

RESTS ON

decision Four months to find out what I want to do next

decision An 80% architect role in a product company, chosen over pay

Building fast, measured.

23

public repositories in 3 organizations

5,065

commits on default branches

1,640

merged pull requests

272

releases

9

live hosts

91%

of non-merge commits co-authored with Claude

One person. As of Sep 24, 2026.

RESTS ON

strategy Model-First Strategy

skill Agentic AI development

The curve.

Commits per day; each tick marks the day a repository was born.

RESTS ON `decision The two products are built in the open`

Building is not the expensive part any more.

about CHF 650

for the subscription in four months, paid

about CHF 9,000

of compute at API list price

about 16 billion

tokens, most of them context read again

It rests on a few providers' prices and terms. The knowledge is portable; **the speed is not yet.**

What the same result would have cost a Swiss team: blust.ch/talks/deciding-well/cost

RESTS ON

strategic objective Every service I pay for is sized to what I use

kpi Plan Fit

Where the time went instead.

95

specs

105

plans

5

phases, each behind a gate

Shape · Spec · Plan · Implement · Integrate — **the Owner merges.**

RESTS ON

process Delivery

rule The Owner's word merges

Taken, revised, dropped.

1,360

decisions written down in 95 specs

72

revised later

30

dropped or parked

1,258

still standing as written

1

revert in 5,065 commits

12

repositories in one release wave, replaced the same day

An agent had to read them out of prose. Next, decisions become part of the model.

RESTS ON

process Deciding

The answer: one graph.

CompanyGraph: vision, strategy, roles, processes, rules and their evidence as one graph, for people and agents.

Plain Markdown in git, served over MCP – **no provider owns it.**

RESTS ON concept Mental Model experience CompanyGraph

It runs.

blust.ch

the mental model of Robert Blust, a company of one
site · MCP server · chat

companygraph.io

the mental model of CompanyGraph, describing itself
site · MCP server · chat

guestgraph.io

the mental model of GuestGraph
site · MCP server · chat
and the product in code: the open-core engine and the Apaleo
connector

Three mental models, each in git, each served three ways. Ask a chat a
question its model can answer.

CompanyGraph and GuestGraph are **ready for scrutiny**: open core, validated in the open.
